on the safe side

## FenderTeam Cone-Fender Systems and Bollards for Maydon Wharf Berth 1-4 & 13-14 at Port of Durban – South Africa

In May 2014, FenderTeam together with our local partner company ACTOM Mechanical Equipment was awarded with the contract for the manufacturing, testing and supply of 59nos. SPC-1600H Cone-Fender Systems and 62nos. Double-T-Head Bollards for the Refurbishment of Wharf 1-4 and 13-14 at Maydon Wharf in the Port of Durban.

The first delivery of rubber units, made by FT's production facilities in Malaysia and the steel panels made by FT's steel fabrication shop in Germany went through extensive testing under the supervision of our clients' QC manager and have passed all stringent requirements of the project specifications.

This projects proves again that testing at the manufacturers facilities under the supervision of the client and/or independent third party is the most efficient and reliable test procedure for all stakeholders of a project.
