

## ShibataFenderTeam Bridge Protection System for the City of Stockholm, Sweden

ShibataFenderTeam's latest fender guide wall installation has just been put in place in the heart of the city of Stockholm, protecting one of the busiest road bridges of the Swedish capital.

With a total length of approx. 320m (1050ft) and consisting of more than 80 steel fender panels with 300+ FE-Fenders, this installation can even be seen from inbound flights into Stockholm. The steel panels were built in Germany at SFT's wholly owned steel fab shop with a radius, precisely following the shape of the concrete wall. The panel front is equipped with low friction pads and an additional layer of reflecting tape to enable visibility at night.
